What is LANOLIN

Lanolin is a pale-yellow, unctuous, waxy material obtained by subjecting natural wool grease through a series of purification processes. Lanolin is an excellent natural emollient which helps soften the skin. Its useful natural moisturizing characteristics are put to good use in skin care and cosmetics products. It finds its application in lip balms, lipsticks and various cosmetics, hair care, ointment bases and soaps. Apart from its varied application in skin care, Lanolin is also used in many other industries like industrial lubricants, anti-corrosive-rust preventive coatings, metal cutting oils, adhesive tapes (surgical/non-surgical), leather treatment, shoe polishes, paints and many more...
